How **Z**mart...

**THE MOST ADVANCED
VIDEO VERIFICATION SERVICE!**

Now we all have the right,
to the right security system
and property protection

ZARIFOPOULOS
SECURITY & CONTROL SERVICES

Safety from A to **Z**

verifiQation is the **Z**martest Optics Event Confirmation System for so many reaZons!

Today, verifiQation is the ideal solution to residential, commercial, industrial property protection needs and intrusion-event handling. Why? Because this is the one and only in the Video Verification Services category that works as if it... thinks!

VerifiQation is a system of visual confirmation events and instant suppressive actions. It combines the functions of an Alarm System, a CCTV, an Access Control etc. Without exaggeration, the specific System looks like a set of components that work together in such a way as to "communicate" between each other.

Indeed, highly sophisticated software supports all stages of this process: a Video & Alarm Handling Software and a Video & Image Analysis Software that undertake to analyze the signals emitted by the System. The System is integrated with the Incident Handling Procedures which undertakes to effectively handle signals received by the Software effectively.

ReaZon 1: the ONE AND ONLY SYSTEM

detecting the real danger!
That's the biggest difference to other video service solutions, of similar specifications, in the market verifiQation is the only system that minimizes the false alarms at the protected premises. It is a very common occurrence; incidents detected by the various systems and activating the alarm, are proven as random events that pose no threat to the property (such as passing animals perceived by the sensors). VerifiQation is a... very intelligent system that can analyze the visual signals and arm the alarm only if there is a reason!

ReaZon 2: the CENTRAL MONITORING STATION

makes the system autonomous and flexible!
Let's have a look on how it works at the diagram below...

ReaZon 3: the ADVANTAGES

- ✔ The System provides you with accurate and quick intervention by specially trained personnel; and even precautionary.
- ✔ It undertakes centralized handling of all buildings.
- ✔ Incidents are resolved before escalating to violence or property loss.
- ✔ It stores all evidence for legal use.
- ✔ You enjoy the system's services 24 hours per day, 7 days per week.

ReaZon 4: the COST-SAVING!

The system is really very economic. Compare verifiQation to other similar services in the market. Thanks to its great ability to minimize false alarms, it really is the choice in your best interest concerning security systems and property protection. Moreover, the cost difference is even larger compared to the guardian security, which unfortunately lacks credibility as it is based entirely on the human factor.

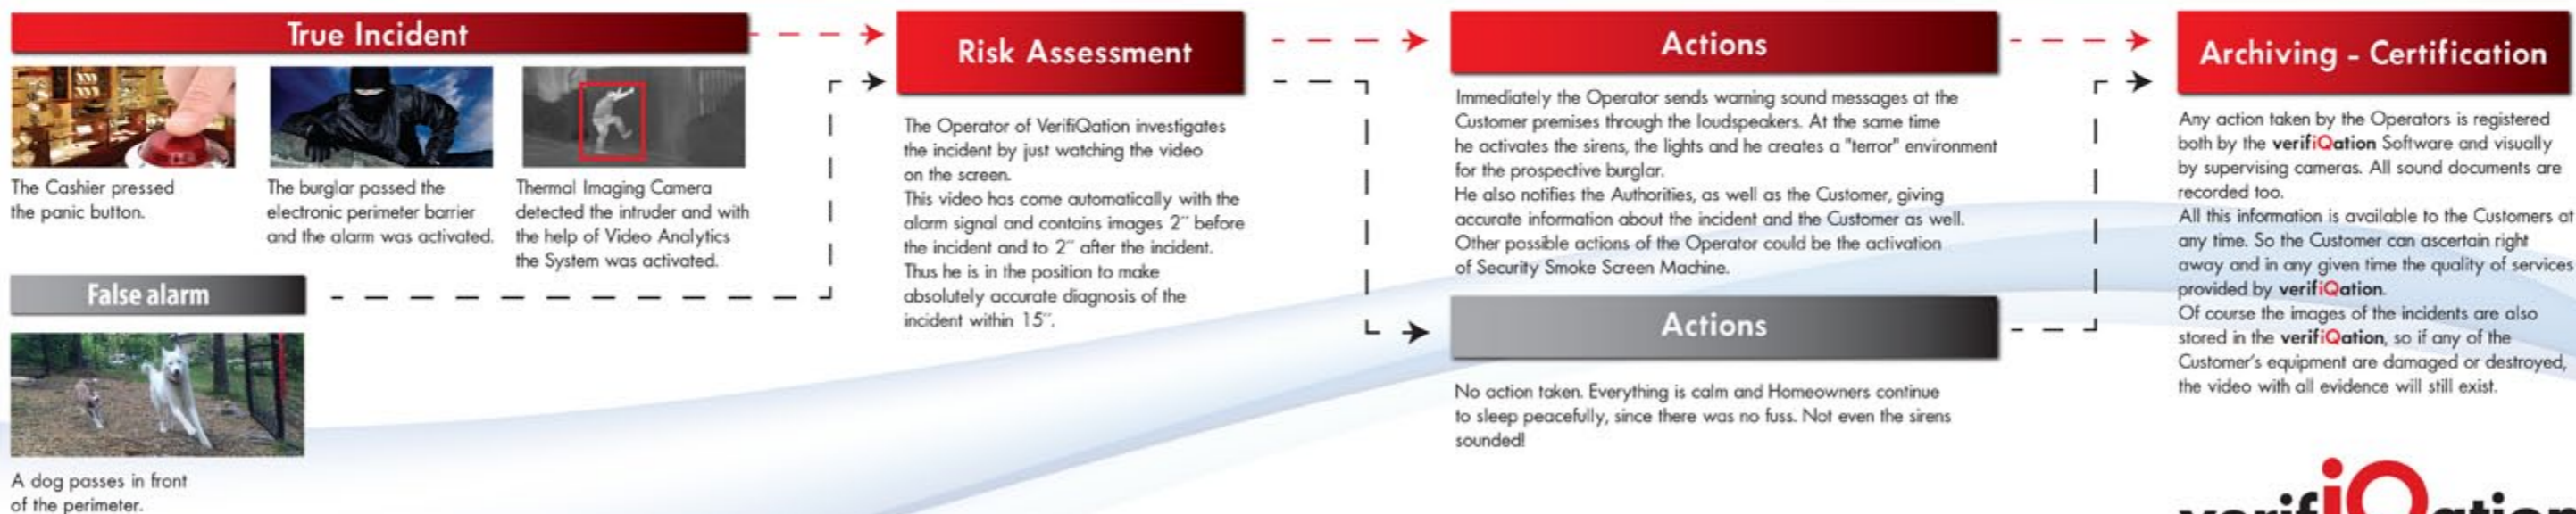

Indicative cost per month for a jewellery store: **75€** + VAT

Indicative cost per month for a plant with a perimeter of 320 m.: **135€** + VAT

ReaZon 5: the RELIABILITY!

All things mentioned above, all the novelty of this first and unique Visual Incident Confirmation System of such qualities in Greece, are even more highlighted with a leading brand name guarantee. The ZARIFOPOULOS signature means prestige and credibility to you. It means feeling safe... feeling real peace of mind!

How does the VerifiQation work?

verifiQation

ADVANCED VIDEO VERIFICATION

The most advanced Video Verification Service
that "thinks **Z**mart" for you and your property, by:

- ✓ minimizing false alarms
